

Portable Benches

Portable benches are enabled in:

```
Config.Portable = {
  Enabled = true,
  ItemName = 'craft_bench',
  Default = {
    label = 'Bancada Portátil',
    model = `prop_tool_bench02`,
    access = { type = 'public' },
    recipes = { ... },
    stash = { enabled = true, slots = 20, weight = 20000 },
    expiresMinutes = nil
  }
}
```

Placed portable benches are stored in:

```
nord_crafting_placed
```

Inventory requirement

If portable benches are enabled, the active inventory must contain the item named by

```
Config.Portable.ItemName
```

.

- With Nord Inventory, use the supported auto-install workflow and verify the item exists after setup.
- With other inventories, create/register the item manually.

Expiration

`expiresMinutes` can be used to create temporary placed benches. `nil` means no configured expiration from this default.
