Configuring Tebex

Configuring Tebex

Tebex can be configured per developer workspace.

Users with product or license management permissions can access the Tebex Bridge configuration.

Workspace settings

The integration supports:

- Enabled/disabled state
- Tebex Headless/public token
- Webhook secret
- Store URL
- Success URL
- Cancel URL

Nord Forge exposes the workspace's webhook URL for use in Tebex.

Environment fallback

Platform-level fallback values can be provided with:

```
TEBEX_HEADLESS_TOKEN=
TEBEX_PUBLIC_TOKEN=
TEBEX_WEBHOOK_SECRET=
```

Per-workspace configuration should be preferred when multiple developer stores use the same Forge platform.
