Downloadable Reference Files

Downloadable Reference Files

Files attached to this BookStack page after import.

Applies to: `Nord Inventory v2.0.0`

This portable BookStack package includes these attachments:

1. **nord_inventory_v2.0.0_owner_reference.zip** — open/owner-editable configuration, locales, shared registry, documentation references, manifest and release validation files. It intentionally excludes protected runtime client/server/web implementation.
2. **nord_inventory.sql** — current database schema shipped with v2.0.0.
3. **server.cfg.example** — ACE/startup example shipped with the resource.
4. **COMPLETE_EXPORT_INDEX.txt** — generated export/reference index for the documented API surface.
5. **MANIFEST.json** — documentation package manifest for v2.0.0.

The reference ZIP intentionally does **not** contain the protected server runtime implementation.
