Received Item Feedback

Received Item Feedback

Compact item notifications for rewards, crafting and received items.

Applies to: `Nord Inventory v2.0.0`

Current defaults:

```
Config.ItemNotifications = {
    Enabled = true,
    Receive = true,
    Duration = 1800,
    MaxVisible = 8
}
```

Different item notifications can be visible simultaneously. Repeated feedback for the same item is merged into the visible card. `MaxVisible` caps concurrent cards and the oldest is replaced first when the cap is reached.
