Trunk & Glovebox Interaction

Trunk & Glovebox Interaction

Access mode, distance checks and interior TAB behavior.

Applies to: `Nord Inventory v2.0.0`

Current vehicle interaction behavior includes:

- `TAB` inside a vehicle opens the glovebox path;
- trunk access uses configured TextUI/Target bridge behavior;
- lock state is rechecked through the configured provider;
- session identity binds to the actual vehicle/net identity/plate data rather than a UI-only selection.
