

Production Checklist

Before deploying Nord Inventory to production, verify the following.

Server

- ☐ `oxmysql` starts before Nord Inventory.
- ☐ Database connectivity is stable.
- ☐ Resource folder remains named `nord_inventory`.
- ☐ Framework detection reports the intended bridge.
- ☐ Admin ACE/license fallback is limited to trusted staff.
- ☐ `Config.Debug` is disabled unless actively diagnosing.

Inventory

- ☐ Player inventory persists through disconnect/reconnect.
- ☐ Inventory persists through resource/server restart.
- ☐ Add/remove/move/split operations work correctly.
- ☐ Fast Slots/hotbar and pinned-item rules work.
- ☐ Ground pickup/drop/throw behavior is correct.
- ☐ Container nesting rules match your design.

Items

- ☐ Item images exist in the expected location.
- ☐ Internal consumable effects/removal are correct.
- ☐ External exports have the correct resource, export and execution side.
- ☐ External handlers return `false` only when use should be cancelled.

- ☐ Runtime item names do not conflict with database-authoritative items.
- ☐ Disabled base items remain disabled after restart.
- ☐ Restore returns base items to the original Lua definition.
- ☐ Metadata visibility does not expose internal/sensitive fields.

Vehicles

- ☐ Trunks work on common front/rear-storage vehicles.
- ☐ No-trunk vehicles are rejected.
- ☐ Glovebox/trunk capacities match your economy.
- ☐ Addon vehicles have saved placement when required.
- ☐ NPC trunk loot rules are intentional and balanced.

Integrations

- ☐ Third-party mutations use Nord server exports.
- ☐ Private stashes validate access server-side.
- ☐ `RegisterUsableItem` callbacks work after resource restart.
- ☐ External client and server item-use paths are tested separately.
- ☐ Hooks that can block actions are tested for false positives.
- ☐ Nord Staff integration is tested after Nord Inventory starts.
- ☐ Nord CarPlay uses the client `carplay` export when following the documented install flow.

Upgrade-specific

- ☐ `Config.Notify`, `Config.TextUI`, `Config.Target` use the current simple provider format.
- ☐ `nord_inventory_disabled_reference_items` exists.
- ☐ No stale or mixed files from older installations remain.

Revision #1
