Server Key Exports

Key creation and removal should be performed from trusted **server-side** resources.

Recommended simple API

```
-- Permanent owner key + physical key item.
exports.nord_vehiclekeys:GiveKeys(source, plate)

-- Remove access/key for the plate.
exports.nord_vehiclekeys:RemoveKeys(source, plate)

-- Check access.
local hasKey, keyType, expiresAt = exports.nord_vehiclekeys:HasKeys(source, plate)
```

Aliases:

```
exports.nord_vehiclekeys:AddKey(source, plate)
exports.nord_vehiclekeys:DeleteKey(source, plate)
exports.nord_vehiclekeys:GiveOwnerKey(source, plate)
```

Shared and temporary keys:

```
exports.nord_vehiclekeys:GiveSharedKey(source, plate, 0)      -- permanent shared
exports.nord_vehiclekeys:GiveSharedKey(source, plate, 3600)   -- timed shared
exports.nord_vehiclekeys:GiveTempKey(source, plate, 900)      -- temporary
```

Advanced API:

```
exports.nord_vehiclekeys:GiveKey(source, plate, 'owner', 0)
exports.nord_vehiclekeys:GiveKey(source, plate, 'shared', 3600)
exports.nord_vehiclekeys:GiveTemporaryKey(source, plate, 900)
exports.nord_vehiclekeys:RemoveKey(source, plate)
exports.nord_vehiclekeys:HasKey(source, plate)
```
